

Day 3 - API Integration and Data Migration

Objective:

The focus for Day 3 is integrating APIs and migrating data into Sanity CMS to build a functional marketplace backend. Students will learn how to utilize APIs for reference, migrate data into Sanity CMS, and ensure compatibility with their templates. This approach replicates real-world practices and prepares students to handle diverse client requirements, including integrating headless APIs or migrating existing data from popular eCommerce platforms.

- Document Title: "Day 3 - API Integration Report - [Your Marketplace Name]"
- What to Submit: o A report documenting:
 - ♣ API integration process.
 - ♣ Adjustments made to schemas
 - ♣ Migration steps and tools used.

● Document Title: "Day 4 - Dynamic Frontend Components – Moto Mart"

Moto Mart - Your One-Stop Destination for Automotive Accessories

Moto Mart is a leading online store dedicated to providing high-quality bike and car accessories at unbeatable prices. Whether you're looking for fog lights, LED headlights, riding gear, or essential vehicle upgrades, we offer a wide range of products to enhance your ride. With a commitment to quality, affordability, and customer satisfaction, Moto Mart ensures a seamless shopping experience for all automobile enthusiasts.

Steps for Building Key Features of an E-commerce Platform

1. Product Listing

Create a database schema for products (name, price, description, category, images).

Develop an API to fetch products from the database.

Design the frontend UI to display products in a grid/list format.

Implement pagination, sorting, and filtering for better navigation.

2. Product Detail Page

Create a dynamic product details route (e.g., /product/:id).

Fetch and display product-specific details (name, price, description, images, reviews).

Add an "Add to Cart" button and display stock availability.

3. Search Bar

Implement a search input field on the homepage/header.

Use real-time search suggestions with debounce for better UX.

Fetch matching products via a search API (query-based filtering).

Display search results dynamically.

4. Admin Panel

Create an admin authentication system.

Develop CRUD functionalities for managing products, categories, and users.

Implement an order management system for tracking purchases.

Add dashboard analytics for sales and performance insights.

5. Cart System

Create a cart model in the database (or local storage for guest users).

Allow users to add, remove, and update quantities of items.

Display cart total, taxes, and checkout options.

Implement a checkout page with payment gateway integration.

6. User Profile

Build user authentication (login, signup, and authentication tokens).

Create a profile page displaying order history, saved addresses, and account details.

Allow users to edit profile information and manage orders.

7. Categories System

Define category models in the database (e.g., Electronics, Accessories, Apparel).

Create an API to fetch categories dynamically.

Design a category-based filtering system for better product organization.

Enable category-based navigation in the UI.

6.Admin:

The image shows a centered login form on a light gray background. The form is a white rectangle with a subtle shadow. It has a title 'Admin Login' in bold black text. Below the title are two input fields: 'Username:' and 'Password:'. Each field is a white rectangle with a thin gray border and rounded corners. Below the password field is a red button with the text 'Login' in white.

Password:

Login

The image shows a dashboard layout. On the left is a dark blue sidebar with a list of menu items: 'Admin', 'Dashboard', 'Products', 'Orders', 'Users', and 'Settings'. 'Admin' is at the top, and 'Dashboard' is highlighted with a lighter blue background. To the right of the sidebar is a light gray main area. At the top of this area is the word 'Dashboard' in bold black text, followed by the text 'Welcome to the Dashboard page!'.

Accessibility

These checks highlight opportunities to [improve the accessibility of your web app](#). Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so [manual testing](#) is also encouraged.

NAMES AND LABELS

▲ Buttons do not have an accessible name

▲ Document doesn't have a `<title>` element

These are opportunities to improve the semantics of the controls in your application. This may enhance the experience for users of assistive technology, like a screen reader.

CONTRAST

▲ Background and foreground colors do not have a sufficient contrast ratio.

These are opportunities to improve the legibility of your content.

[Mobile](#) [Desktop](#)

TABLES AND LISTS

▲ Lists do not contain only `` elements and script supporting elements (`<script>` and `<template>`).

These are opportunities to improve the experience of reading tabular or list data using assistive technology, like a screen reader.

ADDITIONAL ITEMS TO MANUALLY CHECK (10) [Show](#)

These items address areas which an automated testing tool cannot cover. Learn more in our guide on [conducting an accessibility review](#).

SEO

These checks ensure that your page is following basic search engine optimization advice. There are many additional factors Lighthouse does not score here that may affect your search ranking, including performance on [Core Web Vitals](#). [Learn more about Google Search Essentials](#).

CONTENT BEST PRACTICES

▲ Document doesn't have a `<title>` element

▲ Document does not have a meta description

Format your HTML in a way that enables crawlers to better understand your app's content.
